These are data tables from Phase 1 or 2 Results Report. Unfortunately, it appears we did not do a similar comprehensive data table for Phases 3 and 4. All blank contamination issues were called out in the report. Qualification or flagging of data where holding times were exceeded was not done in the Draft Report; however, as indicated previously those were all biased low results. This is only an issue for BTEX compounds since all other VOC data reported was from Shaw and did not have holding time issues. Appendix B Tables B7-B12 call out all the results for blank samples. The QA flags are clearly identified in the Audits of Data Quality for Phase 3 and 4 which are at this link:
